Customers include Germany, Australia, Iceland, Finland, Switzerland, Czech Republic and now Belgium with others in the process. If you want to save more lives and help reduce further injury with a credible deterrent from a road side screen to supplement or replace your FIT please make your feelings know to ACPO Roads or the Police Federation

6. **National Association of Police Fleet Managers**  
[www.napfmevent.org.uk](http://www.napfmevent.org.uk)

In 1986, ACPO approved the founding of the National Association of Police Fleet Managers which was formed from the Annual Police Fleet Engineers Seminar. The NAPFM includes in its membership all UK police forces, some overseas police forces, UK enforcement agencies, some UK emergency services and government departments. The association is responsible for producing national technical specifications for vehicles and accessories. In conjunction with the Procurement Division of the National Policing Improvement Agency (NPIA) the NAPFM produces national framework agreements for the purchase of vehicles, equipment and services, achieving annual savings of tens of millions of pounds. The latest framework agreement for vehicles, announced in September 2010, has resulted in a greater standardisation of vehicles within the Police Service.

The NAPFM Conference & Exhibition is organised by the Wiltshire Police on behalf of the UK Police Service. The event is recognised as one of the best emergency service transport shows in Europe. It attracts delegates and visitors from all the emergency services, government departments as well as overseas police forces.

The 38<sup>th</sup> annual event will be held on the 6<sup>th</sup> & 7<sup>th</sup> September 2011 at the Exec Exhibition Centre, Peterborough for more details please visit the website [www.napfmevent.org.uk](http://www.napfmevent.org.uk)

7. **Nightsearcher Ltd**  
[www.nightsearcher.co.uk](http://www.nightsearcher.co.uk)

11. **PIPS Technology Ltd**

[www.pipstechnology.co.uk](http://www.pipstechnology.co.uk)

PIPS Technology designs and manufactures world leading Automatic Number Plate Recognition systems for police, public safety, security, road user charging, traffic monitoring and congestion charging applications.

Our knowledge in the deployment of over 15,000 ANPR cameras, gives real world experience to advise the most effective ANPR solution. The sole focus of the company is ANPR, and PIPS is dedicated to achieving the highest performance in the world. Based in Hampshire, PIPS Technology has the largest ANPR infrastructure out of anyone in the world. Major contracts include National Traffic Control Centre contract, Trafficmaster, Transport for London's Western Extension Zone, Low Emission Zone, and major Journey Time Monitoring Systems contracts in the UK.

12. **Redspeed International Ltd**

[www.redspeed-int.com](http://www.redspeed-int.com)

RedSpeed™ supply enforcement solutions specialising in the development, manufacture, installation and maintenance of digital enforcement technology to include:-

- Average Speed Enforcement
- Spot Speed Enforcement
- Red Light Enforcement

13. **Tele-Traffic (UK) Ltd**

[www.teletrafficuk.com](http://www.teletrafficuk.com)

International suppliers of Home Office type approved LASER speed enforcement and monitoring equipment.

Full training programme to instructor standard (with supplied equipment).

Outstanding customer back-up and support. (ISO 9001:2000)

For comprehensive further information about our products call 01926 407 272

14. **TTC Group**

[www.ttc-uk.com](http://www.ttc-uk.com)

Reducing road casualties is the TTC Group Mission Statement.

The award winning driver education organisation works in partnership with both the Government and local police authorities to achieve that aim.

Delivering a million hours of training each year across the UK, TTC educates thousands of drivers including those convicted of drink driving, motorists caught speeding and driving carelessly. TTC piloted the first drink drive course back in 1993 and is now the UK's largest provider. It has since expanded its expertise to become one of the major providers of speed awareness and National Driver Improvement Schemes and is now helping to pilot other new driver diversionary re-training schemes.

Employing more than 200 highly experienced instructors, the driver training organisation works closely with police in Wales, Yorkshire, Cumbria, Shropshire, Herefordshire, Worcestershire and the West Midlands to ensure the smooth running of its speed awareness courses.

Through TTC Automotive, a part of the Group, we also train company car drivers and professional drivers including HGV, bus and truck drivers as well as offering a complete vehicle management service for companies. We help firms to reduce their accidents leading to lower insurance costs. Training their drivers also results in lower fuel bills and safer roads for all. Our courses have been praised by many from road casualty reduction managers to royalty, Government Ministers, police chiefs, business leaders - and by those who attend our highly interactive and educational series of courses.

“We know that by educating drivers, we can and do contribute towards safer roads,” said TTC Group Managing Director, Jenny Wynn, who got royal approval for the courses with a special visit from the Princess Royal who toured TTC Group’s new HQ in Telford, Shropshire before performing the official opening ceremony three years ago.

Many motorists say they have changed their driving behaviour as a result of attending a TTC training course.

#### **15.Siemens Traffic Solutions**

[www.siemens.co.uk/traffic](http://www.siemens.co.uk/traffic)

As the leading traffic technology company in the UK, Siemens is dedicated to developing innovative solutions to help improve road safety by using a wide range of advanced products that includes cameras, variable message signs, signals and controllers.

SafeZone is the latest edition to our road safety product portfolio. SafeZone calculates the average speed of vehicles against posted speed limits and has been designed to be installed in suburban and residential areas with the minimum impact to the local environment. SafeZone innovative camera technology means the systems can be installed at significantly lower cost than fixed camera systems whilst retaining the proven road safety benefits of motorway based average speed enforcement system.
